

The Leader in Event Critical Timing Electronics

RaceAmerica Introduces TRACK MARSHAL

Electronic marshalling software gives a boost to racetrack equipment. Track Marshal controls RaceAmerica Corner Safety Lights and Black Flag Displays offering simple, but total racetrack control from any PC

Santa Clara, Ca (May 25, 2010)- RaceAmerica is excited to introduce Track Marshal, its new racetrack equipment control software for the modern racetrack. Combined with RaceAmerica's intelligent Corner Safety Light and Black Flag displays, Track Marshal provides total racetrack control. The goal was to keep the software simple so operators can concentrate on keeping the racetrack safe. TrackMarshal achieves simplicity by incorporating many, easy to use, intelligent features.

The new software can run on most modern PC's and utilizes a straightforward GUI interface that can be customized by uploading a diagram of your track. Using the track diagram you simply drag the [Corner Safety Light \(CSL\)](#) images to the corresponding physical locations on the track to create a personalized virtual track/light layout. The safety lights can be assigned to work individually or in groups with the devices activated by merely clicking on them. The CSL screen images can be size and transparency adjusted by simply moving scroll bars. Communication commands including steady on, flashing, and entire group activation are also just a click of the screen. [Black Flag displays](#) are operated using the computer keypad combined with on-screen commands. Brightness levels of the physical devices can be adjusted via a scroll bar for night events or other occasions where full brightness is not optimal.

"Electronic Track Marshaling is an important step in moving racetrack technology forward while improving track worker safety," said Dennis Laczny, President of RaceAmerica. "The combination of advanced wireless technology, intelligent display manufacturing and modern software development helped us produce an effective racetrack safety package."

A demo version of the Track Marshal software can be downloaded at:

The Leader in Event Critical Timing Electronics

Founded in 1991, RaceAmerica is the industry leader in advanced event critical timing electronics. The Company designs and manufactures a complete line of portable timing systems, software, and LED-based scoreboards and displays for use in both single and multi-lane snowmobile, autocross, mud bog, soap box derby, ATV, and drag racing. RaceAmerica also provides a variety of customized timing solutions for private, commercial, and industrial applications. RaceAmerica is recognized worldwide for their innovativeness, reliability, speed, and accuracy. The Company produces the world's only state-of-the-art, fully wireless drag racing timing system and continues to innovate with flexibility to match unique customer needs. RaceAmerica also supports the thousands of systems that it has operating in over 40 countries with unrivaled customer and technical assistance. Learn more about RaceAmerica at www.RaceAmerica.com.
